

Craneware®

Chargemaster Corporate Toolkit™

Powerful Corporate CDM Management Software with the Flexibility you Require

Taking control of multiple hospital chargemaster files can be an administrative nightmare if not planned or implemented properly. Whether you are one of two hospitals, or part of a larger integrated care delivery network, the goal of creating a corporate CDM can be a daunting challenge for even the most experienced professionals. Craneware's **Chargemaster Corporate Toolkit™** software can make that task achievable.

Moving to a corporate standard requires an ability to efficiently and accurately recognize the same services across multiple hospitals and departments. Disparate billing systems and independent CDM maintenance processes can create inconsistencies in description, revenue code and HCPCS code assignments, making comparisons time consuming and cumbersome.

The good news? Craneware's **Chargemaster Corporate Toolkit™** is a flexible, easy to use tool with the power to effectively standardize multiple CDM's. Whether your goal is to maintain synchronization with an existing corporate standard or develop one internally, this product will meet your needs and adapt to your information system's variances.

Craneware's **Chargemaster Corporate Toolkit™** identifies the same services across two or more hospital CDM's using sophisticated 'intent of service' logic in conjunction with assigned revenue and HCPCS codes. The big advantage is, unlike other corporate standardization vendors, you don't have to be forced into an external standard against which to match your charge detail data. The control is yours, and you decide the level of standardization maintained between your facilities and charge files over time, on a schedule that fits your facility's operational needs and timetable.

A structured communication process offers you the option of a centralized, decentralized or collaborative workflow model to maintain your corporate standard. Once your CDM's are linked, you can edit your corporate CDM once and seamlessly transfer the data across your system.

Craneware's **Chargemaster Corporate Toolkit™** applies all the audit technology, regulatory reference and documentation tools of the number one selling standard Craneware Chargemaster Toolkit into one integrated package. Easy to use analytical and reporting capabilities give you the power to identify inconsistencies and opportunities across hospitals quickly.

We don't just manage part of your CDM, we give you a platform to be in control of your data and process across all your facilities.
