

# Craneware<sup>®</sup>

## Decision Dashboard<sup>™</sup>

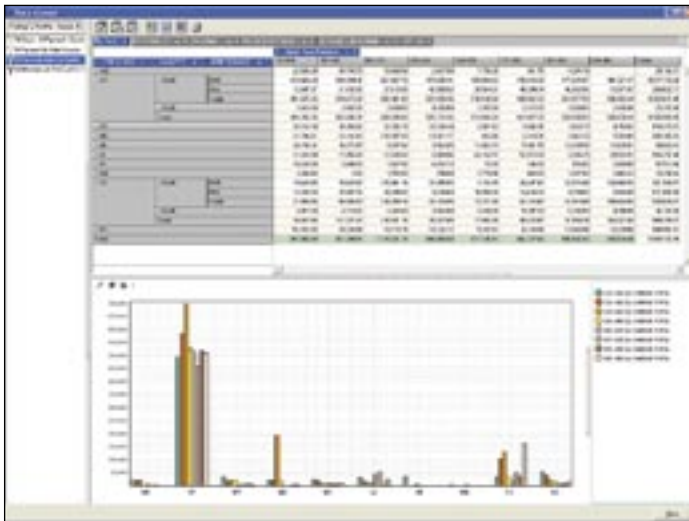

### Designed by Industry Leaders for Industry Leaders

Craneware's **Decision Dashboard<sup>™</sup>** is a Business Intelligence system that can markedly increase the strategic value of the enormous amounts of data contained within your existing hospital and practice systems by putting timely, action-oriented information into the hands of more people in your organization. **Decision Dashboard<sup>™</sup>** easily integrates into your existing information systems infrastructure, putting your team in control over what business objectives to focus on, what data is important and what indicators and metrics to monitor – all with a drag and drop simplicity that allows anyone to use the system effectively from day one.

Friendly, wizard-driven functionality allows users to create graphical summaries of Key Performance Indicator

(KPI) trends where they can immediately drill down into the underlying data to obtain a detailed view of the causal factors driving the trend. It is this accurate and timely access to information that has allowed users of Craneware's **Decision Dashboard<sup>™</sup>** to increase revenue, improve operational efficiency, cut costs and optimize asset value.

**Data View**

Craneware has used its extensive healthcare experience to develop an easy to implement, easy to use, and easy to maintain desktop tool that helps hospitals and physicians monitor their financial performance and operate more efficiently. Data is updated continuously to ensure that your team has access to accurate and timely information, allowing you to take the appropriate corrective actions in problem trend areas.

### Features and benefits of Decision Dashboard<sup>™</sup> include:

- Easy to build KPI templates allow for a quick set up and installation, while the easy-to-use wizard allows you to define, add or change the KPI's relevant to your facility or project.
- Graphical dashboards allow an 'at a glance' visibility of how your facility is performing, while 'drill down' capabilities allow you to investigate the underlying data and analyze problems more in-depth.
- Users can easily define the data view and ad-hoc reports to meet your organizations priorities and requirements. No technical expertise is necessary.
- Information is constantly refreshed, so there is no need to continually reconcile month-end reports before basing your key business decisions on them.
- Daily updates of data ensure you are getting the most accurate and up-to-date picture of how your business is performing.
- All data remains securely within your facility – no data is exported to the Internet. This eliminates possible security breaches of transferring sensitive data out of your hospital.

# Decision Dashboard™

## Craneware's Business Intelligence tool allows hospitals to easily track and monitor:

- Accounts Receivables Management
- Aged Trial Balance Collections
- Self Pay Trending and Collections
- Physician Performance Management
