

Craneware®

Physician Revenue Toolkit™

Charge Capture Management Software for the Clinical Office Setting

Craneware's **Physician Revenue Toolkit™** provides you with an easy to use software solution to optimize revenue, improve charge capture accuracy and promote compliance with Medicare regulations and the latest coding changes. The tool also provides a simple way to evaluate RVU and fee schedule usage at a line item detail and improve regulatory compliance.

Practice management systems do not contain the type of sophisticated and up-to-date regulatory content that allows you to model pricing and ensure you remain competitive and accurate with your coding and billing. This program is a unique and powerful combination of PC, analytical and Web-based reference tools that help you identify opportunities for improving the data integrity of all line items in your charge item master.

Physician Revenue Toolkit™

- Identifies missing charges and out-dated or incorrect procedure codes which could amount to thousands of dollars of potentially missed revenue or rejected claims.
- Provides regular and timely updates to keep you current with CCI edits, LCDs, NCDs and all the latest reimbursement and coding.
- Includes a communication structure to document decisions and changes specific to your practice.
- Allows you to maintain and analyze multiple fee schedules so you can compare your potential reimbursement against charges.
- Provides powerful reference tools for your staff to obtain instant access to coding and medical necessity information which allows you to eliminate books, manuals or other software tools.
- Maintains a detailed audit trail of historical changes and effective dates, greatly improving charge control.

The end result is an accurate and compliant charge file that prevents incorrect codes from ever reaching the patient's bill. With our reputation for outstanding training and support, your satisfaction with our customer relations is sure to exceed your expectations. Our industry expertise brings you best practice knowledge from the cutting edge of the field so you can get back to taking care of patients, not taking care of coding and billing issues.
